

**Time Management
for Microsoft Dynamics**

DynaTime collects employee time, manufacturing process data, and warehouse activity when it happens. It feeds this information directly into your Microsoft Dynamics manufacturing, sales order or job costing system. The result is the real time data collection of time and work completed – right from the source.

DynaTime

Time Management for Microsoft Dynamics®

**Time Management
for Microsoft Dynamics®**

DynaTime has several modes, each for a specific industry and function

Industry	Time & Attendance	Mode		
		Shop	Ware-house	Job/Service
<i>Manufacturing</i>	Yes	Yes		
<i>Process Manufacturing</i>	Yes	Yes		
<i>Job Shop</i>	Yes	Yes		
<i>Distribution</i>	Yes		Yes	
<i>Third Party Logistics/3PL</i>	Yes		Yes	
<i>Construction</i>	Yes			Yes
<i>Professional Services</i>	Yes			Yes
<i>Field Service</i>	Yes			Yes

Why Improve Time Management?

Improve Supervision. Save time by allowing supervisors to review production labor detail online.

Increase Job Accuracy. Eliminate key entry errors of time posting to incorrect projects or tasks.

Save Administrative Time. Stop entering time manually into payroll and upload it automatically. Eliminate paper timesheets. Stop calculating overtime by hand.

Increase Customer Service. See in real time who is working on what jobs; use actual job labor content to estimate completion dates for the customer.

Find Estimating Problems. Compare actual labor against estimates and isolate estimating problems.

DynaTime

Time Management for Microsoft Dynamics®

DynaTime facilitates labor time collection by providing real-time recording of employees scanning into work or starting work on a job. It batches time for supervisor review, correction, or posting into various payroll and Dynamics job costing end points.

Use DynaTime attendance mode to collect time and attendance information. Send this as a timesheet to your payroll system through the payroll interface. Afterwards, switch to job scanning mode and help automate the manufacturing process by scanning labor and material data collection directly from the shop floor.

“We have implemented DynaTime in all of our locations across the country. The employees adapted easily and we have realized significant improvements in the efficiency and accuracy of our time collection process.”

Pat Marsteller, Sparks Exhibits
